Summary

Senior Frontend / Product Engineer with 6+ years in large-scale marketplace, advertising, and platform environments. Deep in React, TypeScript, and BDUI / Server-Driven UI — building renderers, component systems, and backend-driven UI contracts that scale across web and mobile. Brings backend context in Go and Python/Flask, ships AI-tooled workflows daily, and has consistently owned cross-functional feature delivery from architecture through production.

Skills

Frontend: React, TypeScript, JavaScript, HTML, CSS, browser APIs, frontend architecture, component systems, state management (Redux, Effector)

Performance & quality: browser profiling, React performance, Core Web Vitals, TBT, LCP, SEO-aware UI, unit/integration testing, production debugging

Platform & product: BDUI / Server-Driven UI, cross-platform renderer architecture, reusable UI systems, technical decomposition, mentoring, technical interviews

Backend & data: Go, Python, Flask, PostgreSQL, REST APIs, data processing pipelines

AI tooling: Cursor, Claude, GitHub Copilot, OpenAI Codex

Experience

Avito · Software Engineer

Nov 2025 – present | Remote

— BDUI renderers now power ~27–30% of Avito product surfaces.

— Translate backend UI schemas into typed React/TypeScript interfaces — explicit loading, error, and edge-state handling baked into every component contract.

— Move frontend behavior into backend-driven contracts, decoupling feature delivery from mobile release cycles and keeping web and mobile rendering in sync.

— Coordinate across product, design, backend, web, and mobile to ship platform features end-to-end.

Yandex · Frontend Web Developer · Market, Advertising & Monetization

Sep 2023 – Oct 2025 | Almaty, Kazakhstan

— Drove ~1–3% CPM lift by shipping video embedding into ad snippets — first video-in-ad surface on the Yandex Market platform.

— Rebuilt the web ad carousel to accept a new cross-platform image format across 3 product surfaces.

— Reworked queue dispatcher and snippet renderer to support dynamic UI composition without regressions.

- Led performance investigation on SEO-sensitive ad surfaces; cut TBT and first-load payload.
- Ran on-call rotations, conducted technical interviews, mentored junior engineers.

LifeIT · Frontend Developer → Senior Frontend Developer

Aug 2021 – Aug 2023 | Moscow, Russia

- Reduced initial page load from 7 s to under 1 s by redesigning the map module's data-loading strategy.
- Led a major customs software project from architecture through delivery; promoted to Senior after 15 months.
- Built Python/Flask and PostgreSQL services for large-dataset processing feeding a React/Redux frontend.
- Mentored junior engineers and supervised an intern.

Movicom Electric · Web Developer

Nov 2019 – Jul 2021 | Moscow, Russia

- Built the React frontend for a cloud platform monitoring warehouse battery performance across distributed sensor networks.
- Implemented operational dashboards and real-time analytics visualizations.
- Integrated with a Flask/PostgreSQL backend and maintained an FTP-based raw-data ingestion pipeline.

Education

Bauman Moscow State Technical University · Bachelor's, Applied Machines

2005 – 2011
